A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/17/09 has been entered.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1,2,4-7,9,14,18,20-28 are rejected under 35 U.S.C. 102(a,e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Tarsa, of record.

The new limitations are not distinguished over Tarsa because the different legs of the transparent electrodes are physically isolated from one another in that they occupy different areas of the device.

Claims 1,2,4-7,9,14,18,20-28 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Katayama, of record.

The previous rejection still applies. The transparent electrodes of Katayama are also physically isolated in that at least portions of the transparent electrodes occupy different areas of the device.

Claims 1,2,4-7,9,14,18,20-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tarsa in view of Katayama, of record.

The previous rejection still applies.

Art Unit: 2815

Applicant's arguments filed 3/17/09 have been fully considered but they are not persuasive. The new amendments do not state the transparent electrodes are everywhere physically isolated from one another, and therefore do not structurally distinguish over the applied art. In the applied art, the transparent electrode "fingers", "extensions", or "legs" are "physically isolated" from one another, and also "electrically connected".
